Installation Instructions

Installation Clearance Requirements

When installing the cooler, follow the recommended spacing dimensions shown.

- ▶ For proper clearance of the electrical plug, allow at least 25mm of clearance at the back as shown in the diagram.
- ▶ An installation next to a wall will require a minimum 48mm door clearance to accommodate the Zephyr handle.
- ▶ The cabinet should allow at least 610mm for the width and 1770mm for the height to accommodate the cooler.
- ▶ The power cable is located on the back right of the unit and has a length of 2000mm to accommodate multiple outlet locations.
- ▶ Once you are ready to install the unit, you must adjust the feet to level the coolers. An improperly leveled drawer may not close properly.
- ▶ The installation should allow the unit to be pulled forward for servicing, if necessary.
